

Chemicals Compatible with Beneficial Nematodes

All materials listed as compatible should have no detrimental interaction with any insect-parasitic nematodes. Those designated as “Use one week before/after” and “Use two weeks before/after” should not be applied at the same time as our beneficial nematode based products. However, those products can be applied as instructed and should not be detrimental to insect-parasitic nematodes. There are many products with different trade names - look under “Active Ingredients” on the label to find the chemical name.

Compatible:

| | | |
|------------------------|--|-----------------------------------|
| Azadirachtin | Esfenvalerate | Methoprene |
| Bacillus thuringiensis | Etridiazole | Nicotine sulfite |
| Benomyl | Fatty acids | Oryzalin |
| Bifenthrin | Fenoxycarb | Pentachloronitrobenzene (PCNB) |
| Bromine-chlorine | Fluvalinate | Permethrin |
| Chlorothalanil | Fosethyl-Al | Pyrethrins |
| Chlorthal dimethyl | Glyphosphate | Rotenone |
| Copper hydroxide | Imidacloprid (synergistic with nematodes) | Thiophanate-methyl |
| Cyflutrin | Iprodione | Triademefon |
| Cypermethrin | Kinoprene | Vinclozolln |
| Diatomaceous earth | Kinoprene | Wide range of soluble fertilizers |
| Dienochlor | Metalaxyl | |
| Diflubenzuron | Methidathion | |

Use one week before/after:

| | | |
|-----------------------|--------------------|-----------------|
| Anilazine | Mercurous chloride | Azinphos-methyl |
| Benzalkonium chloride | 2, 4-D | Bendiocarb |
| Fenarimol | Triclorpyr | Methomyl |
| Furalaxyl | Malathion | |

Use two weeks before/after:

Carbofuran
Ethoprop
Isazophos
Fenamiphos
Oxamyl
