Chemicals Compatible with Beneficial Nematodes

All materials listed as compatible should have no detrimental interaction with any insect-parasitic nematodes. Those designated as “Use one week before/after” and “Use two weeks before/after” should not be applied at the same time as our beneficial nematode based products. However, those products can be applied as instructed and should not be detrimental to insect-parasitic nematodes. There are many products with different trade names - look under “Active Ingredients” on the label to find the chemical name.

**Compatible:**

- Azadirachtin
- Bacillus thuringiensis
- Benomyl
- Bifenthrin
- Bromine-chlorine
- Chlorthalidone
- Copper hydroxide
- Cyflutrin
- Cypermethrin
- Diatomaceous earth
- Dienochlor
- Diflubenzuron
- Esfenvalerate
- Etridiazole
- Fatty acids
- Fenoxycarb
- Fluvalinate
- Fosetyl-Al
- Glyphosate
- Imidacloprid (synergistic with nematodes)
- Iprodione
- Kinoprene
- Metalaxyl
- Methidathion
- Methoprene
- Nicotine sulfite
- Oryzalin
- Pentachloronitrobenzene (PCNB)
- Permethrin
- Pyrethrins
- Rotenone
- Thiophanate-methyl
- Triadimefon
- Vinclozolln
- Wide range of soluble fertilizers

**Use one week before/after:**

- Anilazine
- Benzalkonium chloride
- Fenarimol
- Furalaxyl
- Mercurochrome chloride
- 2, 4-D
- Triclorpyr
- Malathion
- Azinphos-methyl
- Bendiocarb
- Methomyl

**Use two weeks before/after:**

- Carbofuran
- Ethoprop
- Isazophos
- Fenamiphos
- Oxamyl
